The HXT(Heretic Token) Ecosystem

Heretic City

Heretic Protocol

Structural Engineering of Decentralized Liquidity

Unlock XRPL Capital → Starknet DeFi

Bring Dormant XRP into a Productive ZK Ecosystem

The Problem

XRP Liquidity is Massive & Underutilized

No Access to ZK DeFi or Composable Yield

Existing Bridges are Custodial & Insecure

Result: Liquidity Desert

The Opportunity

Starknet = High-Performance ZK Execution Layer

Low Fees + Scalable Yield Infrastructure

Missing Piece: The High-Throughput XRP Secure Gateway

The Solution

The XRP → sXRP Bridge (1 : 1 backed)

Sequential Relayer (high integrity)

HXT Token (economic flywheel)

Risk Lab (yield vault system)

More Than a Bridge — A Liquidity Engine

Bridge Flow (trust-minimized)

Uses delivered_amount (eliminates partial payment exploit)

Validated Ledger + tesSUCCESS Filtering

XRPL User → ***Door Vault*** → ***Relayer*** → ***Starknet sXRP***

Relayer = Execution Core

Real-Time XRPL Ingestion (web-sockets)

Sequential Nonce Control (no collisions)

Idempotent Minting (no duplicates)

Built for Production Throughput

Economic Flywheel

Bridge Actions Increase Token Scarcity

Volume → Demand → Stronger Ecosystem

Bridge Volume → ***0.5% Margin*** → ***Buyback*** → ***Burn → Scarcity***

Risk Lab (yield engine)

User-Defined Risk Tiers

Stable → Aggressive Yield Spectrum

Boosted by Protocol Fee Redistribution

Risk Tiers:

Shield ***Patrol*** ***Vanguard*** ***Heretic***

Why Starknet

Ekubo Concentrated Liquidity (low slippage)

Pyth Oracle Protection (price integrity)

STWO Prover + Decentralized Sequencing

Built Specifically for Starknet’s Future

The Vision & Grant Ask

Become the XRP Gateway to ZK DeFi

Expand to BTC + Multi-Asset Bridging

Decentralize Relayer Network

Grant Supports:

- Relayer Decentralization
- Cairo Contract Expansion
- Risk Lab Scaling
